## FUNGHI IN BALLETTA O MICELIO

Substrato confezionato in comode "balle" dal peso di circa 12 Kg che può essere conservato per una decina di giorni in un ambiente fresco ed umido. La coltivazione è semplice e, tranne nei mesi freddi, non è necessario disporre di un'apposita serra, è sufficiente una semplice cantina. A corredo del substrato per la produzione dei funghi vengono fornite le modalità di coltivazione del substrato. In poche settimane dai fori della balla spunteranno dei gustosi funghi auto-prodotti Oppure possibilità di avere le stesse varietà in Micelio Fresco, per seminare dove si vuole il fungo. Perfetto per semina su cortecia, sotto piante o substrato.
